

SHREESH CHAUHAN

631-652-8616 | shreesh.chauhan@stonybrook.edu |  | 

EDUCATION

Stony Brook University

Bachelor of Science in Computer Information Systems and Applied Mathematics

Stony Brook, NY

Expected May 2029

EXPERIENCE

Founding Engineer

Jan. 2026 – Present

CRIZM

Stony Brook, NY

- Architected ML backend and data pipeline infrastructure for a production AI-assisted grading and accreditation platform, owning APIs, storage architecture, evidence ingestion, and structured export workflows across a multi-term research system
- Extended Joern-based static analysis tooling to support C++ and Python codebases, enabling automated, multi-language code quality assessment integrated directly into the grading and feedback pipeline
- Built a C program analysis engine using Frama-C to generate per-function PDGs and approximate interprocedural SDGs, implementing a weighted graph similarity scoring system (GED, cyclomatic complexity, control-flow patterns) for automated code comparison across student submissions

Web Developer Assistant

Jan. 2026 – Present

Auxiliary Services Association at SBU

Stony Brook, NY

- Improved organic discoverability and accessibility compliance by refactoring metadata, semantic navigation hierarchies, and content workflows across multiple production university websites
- Audited and optimized 15+ OmniCMS-managed pages using HTML, CSS, and JavaScript, achieving WCAG 2.1 Level AA compliance and measurable Core Web Vitals improvements

PROJECTS

Fraud Investigation Copilot | *Python, PyTorch Geometric, GraphSAGE, Gemini API, FastAPI, Streamlit*

- Engineered a GraphSAGE GNN fraud detection system modeling structural transaction patterns (money rings, structuring, smurfing), detecting fraud invisible to traditional rule-based and ML models
- Integrated Gemini LLM to auto-generate regulatory-grade SAR narratives, reducing manual investigation time from 3 hours to under 60 seconds (180x speedup)
- Deployed end-to-end via FastAPI backend and Streamlit chat interface, enabling investigators to query flagged subgraphs in natural language

CourtPrice | *React, Node.js, Express, REST API, eBay Browse API, CSV Data Processing*

- Built a full-stack tennis analytics platform with real-time ATP player search and live signed-memorabilia pricing, integrating the eBay Browse API for dynamic market data
- Designed a multi-route REST API decoupling local CSV match history from live third-party APIs, aggregating pricing metrics (avg, min, max, count) into structured JSON responses
- Engineered a CSV data pipeline to parse and filter ATP records by player, surface, and tournament with sub-second lookup performance; automated CI/CD via TravisCI

Sol Quest | *Phaser, Solana, Web3*

Hopper Hacks 2026 – Beginner Track Winner

- Co-built a Phaser top-down game on Solana where players pay entry fees and earn real cryptocurrency rewards, implementing full wallet integration and on-chain transaction handling
- Engineered real-time on-chain reward distribution and end-to-end state management between game logic and blockchain layer
- Shipped a functional full-stack Web3 product within a hackathon timeframe, placing 1st in the Beginner Track

TECHNICAL SKILLS

Languages: Java, Python, SQL (Postgres), JavaScript, TypeScript, HTML/CSS

Tools: Git, MySQL, FastAPI, Streamlit, Docker, Kubernetes, AWS, Redis, React, Node.js/Express, Vite, Supabase, REST APIs

ML/ AI : PyTorch, PyTorch Geometric, GraphSAGE GNN, Gemini API, NetworkX, Pandas, Claude API, Scikit-learn, NumPy

Areas: Backend Dev, ML Systems, Blockchain/Web3
